External :

ACKNOWLEDGEMENT

It's our earnest and sincere desire and ambition to acquire profound knowledge in the study of Bachelor in Computer Science. I am grateful to God, the Almighty who has blessed me abundantly and guided us to complete this task.

We express our sincere thanks to our beloved secretary **Rev. Sr. SAGAYAM.** Immaculate College for women (Arts and Science) Cuddalore, for providing such a good congenial environment to enlighten my knowledge

We express our sincere gratitude to our principal **Dr. M. SUSILADEVI.,(M. Sc .,M. Phil., Ph .D,)** PG & Department of Botany for the motivation and encouragement in successful completion of the project.

We take immense pleasure in conveying my sincere and deepest gratitude to our internal guide **Ms. S. SUBBULAKSHMI., M.C.A. ,M. Phil.,** Professor, Post Graduate and Head of the Department of Computer Science & Application, for her valuable guidance, inspiration, consent and motivation throughout the development of the project.

At the outset, we extend my sincere gratitude to all our Staff of Computer Science for having rendered all Support whenever needed.

We will fail in our duty if I do not put on record my heartfelt gratitude to my beloved parents for their financial and material support as well their words of encouragement and motivation to complete this project successfully.

Last but not the Least, We place my deepest sense of gratitude to all our friends who had inspired and supported we to complete this project more successfully.

ABSTRACT

The Event Management is the process of planning, organizing, and executing events, such as conferences, weddings, concerts, festivals, and other types of gatherings. It involves coordinating various aspects of an event, including logistics, budgeting, scheduling, marketing, communication, and risk management.

The main objective of Event Management is to create a memorable and successful event that meets the expectations of stakeholders, such as clients, attendees, sponsors, and vendors. To achieve this goal, event managers need to have a strong understanding of the event industry, trends, and best practices, as well as effective communication, problem-solving, and negotiation skills.

Event Management requires a high level of attention to detail and the ability to manage multiple tasks simultaneously. It involves working with a wide range of people, including vendors, clients, sponsors, and attendees, and requires the ability to coordinate different teams and resources to deliver a successful event.

Overall, Event Management is a complex and dynamic field that requires creativity, flexibility, and a strong sense of teamwork. It plays a critical role in bringing people together and creating memorable experiences that contribute to personal and professional growth, social connection, and cultural exchange.

The project titled “EVENT MANAGEMENT” is designed to computerize the Customer details of an event booking. The project is developed with “HTML, CSS, and BOOTSTRAP” as the front end and “GOOGLESHEET” as the back end. The EVENT MANAGEMENT will automatically generate the Bill with their event ordering. This computerization will help in many instances and reduce the traveling time to visit the hall. The project will store the customer details of like Customer name, Customer id, Contact Details, Address, Event Order and Generate Bill

CHAPTER – I

INTRODUCTION

1. ABOUT THE PROJECT

The Project “EVENT MANAGEMENT” is an try to make a record system for to organize and store the Customer Details. The EVENT MANAGEMENT Stores various details of the Customer like Name, Contact Details, E-mail id, Address, Based on Event Order.

1.1 NEED FOR THE PROJECT

EVENT MANAGEMENT is a process in which one can order the hall based onevent and beverages from some local hall and hotels through the use of internet, just by sitting at home or any place we can book the hall on event.

1.2 BENEFITS OF PROJECT

It goes without saying that organising an event, no matter the type of size, it is going to be stressful. There is so much to think about, to consider and to plan for, so, you may find that over time it all gets a little overwhelming. The idea of hiring an event management company is that they can take on most of the stressful tasks, leaving you with very few worries about your event.

CHAPTER- II

SYSTEM ANALYSIS

2.1 EXISTING SYSTEM

- In early days people are visit to hotel or hall and book the hall based on event

2.2 DRAWBACKS OF EXISING SYSTEM

- Difficult to handle work manually. Time consuming process more human power required
- It is hectic to handle the huge transaction
- In long run, it is difficult to maintain transition

2.3 PROPOSED SYSTEM

The analysis is made with the existing system and its pitfalls and a proposed system is made. A proposal is made for developing a full automated system.

2.4 FEASIBILITY STUDY

The system to be developed must be developed in such a way that it overcome the pitfalls identified in the previous system. So, to be more effective, the feasibility study is made. There are various types of feasibility studies carried out for the efficiency of the system. Two of them are very important in the initial stages of the project.

2.4.1 TECHNICAL FEASIBILITY

Technical part of a project is as important as it is going to matter much after automating the system. The software needs to be developed in the right platform with the right software. This technical compatibility alone marks the true success of the project and stands as the difference between the manual and automated system. After careful analysis, the proposal is made to implement the project as a website .

2.4.2 OPERATIONAL FEASIBILITY

The Operational part both access and view level decides the output of the project and also the satisfaction of the user who uses the system. The Operational feasibility helps the project to develop user friendly features in the website and can support the development of website in an efficient manner.

2.5 ALTERNATIVE SOLUTION

- Alternative solutions also should be considered in order to merit the selected solution for the existing problem.
- It could be developed using any Rapid Application Development tool, so that development time is reduced.
- It could have been developed using Web Builder also, but there are drawbacks if we use them and moreover the organization has already many products developed using Asp.net technology.
- We can know about the tender reports easily through online. We can also know about the tender types.
- We also can know about the updated information
- The data dictionary is used to collect inter relational data type, data
- Name and data size of the table..It is mainly used for designing the table

CHAPTER –III

SYSTEM SPECIFICATION

3.1 HARDWARE REQUIREMENTS

HARDWARE	SPECIFICATION
MONITOR	14.0 “INCHES
KEYBOARD	NUMERIC OR MULTIMEDIA
SSD	512 GB
MOUSE	OPTICAL OR NORMAL
RAM	4 GB
PROCESSOR	INTEL i3 7th gen

3.2 SOFTWARE REQUIREMENTS

COMPONENT	SOFTWARE & TOOLS
FRONTEND	HTML5, CSS 3
BACKEND	GOOGLE SPREADSHEET
DESIGNING TOOLS	VISUAL STUDIO CODE
BROWSERS	GOOGLE CHROME

CHAPTER - IV

SOFTWARE DESCRIPTION

4.1 VISUAL STUDIO CODE EDITOR :

MICROSOFT VISUAL STUDIO

Visual Studio Code is a lightweight but powerful source code editor which runs on your desktop and is available for Windows, Mac OS and Linux. It comes with built-in support for JavaScript, Type Script and Node.js and has a rich ecosystem of extensions for other languages and runtimes (such as C++, C#, Java, Python, PHP, Go, .NET). Begin your journey with VS Code

Extension Marketplace

Increase the power of Visual Studio Code through Extensions

The features that Visual Studio Code includes out-of-the-box are just the start. VS Code extensions let you add languages, debuggers, and tools to your installation to support your development workflow. VS Code's rich extensibility model lets extension authors plug directly into the VS Code UI and contribute functionality among through the same APIs used by VS Code. This article explains how to find, install, and manage VS Code extensions from the

CDN links

As reference, here are our primary CDN links.

Description	URL
CSS	https://cdn.jsdelivr.net/npm/bootstrap@5.2.2/dist/cs
JS	https://cdn.jsdelivr.net/npm/bootstrap@5.2.2/dist/js

You can also use the CDN to fetch any of our additional builds listed in the Contents page.

Next steps

- Read a bit more about some that Bootstrap utilizes.
- Read about what's included in Bootstrap in our contents section and the list.

- Need a little more power? Consider building with Bootstrap by including the source files via package manager.
- Looking to use Bootstrap as a module with `<script type="module">`? Please refer to our using Bootstrap as a module section.

JS components

Curious which components explicitly require our JavaScript and Popper? Click the show components link below. If you're at all unsure about the general page structure, keep reading for an example page template.

Important Global

Bootstrap employs a handful of important global styles and settings, all of which are almost exclusively geared towards the normalization of cross browser styles. Let's dive in.

4.2.HTML5 Doctype

Bootstrap requires the use of the HTML5 doctype. Without it, you'll see some funky and incomplete styling.

```
<! Doctype html>
<html Lang="en">
...
</html>
```

Responsive Meta tag

Bootstrap is developed mobile first a strategy in which we optimize code for mobile devices first and then scale up components as necessary using CSS media queries. To ensure proper rendering and touch zooming for all devices, add the responsive viewport Meta tag to your `<head>`.

```
<meta name="viewport" content="width=device-width, initial-scale=1">
```

you can see an example of this in action in the quick start.

Box-sizing

For more straightforward sizing in CSS, we switch the global box-sizing from content-box to border-box. This ensures padding does not affect the final width of an element,

But it can cause problems with some third-party software like Google Maps and Google Custom Search Engine.

On the rare occasion you need to override it, use something like the following:

```
{  
Selector-for- some-widget  
boxsizing: content- box;  
}
```

With the above snippet nested elements—including generated content via: before and: after—will all inherit the specified box-sizing for that .selector-for- some- widget.

Learn more about box model and sizing at [CSS Tricks](#).

4.2.1 CSS: Cascading Style Sheets

Cascading Style Sheets (CSS) is a style sheet language used to describe the presentation of a document written in HTML or XML (including XML Dialects such as SVG, MathML or XHTML). CSS describes how elements should be rendered on screen, on paper, in speech, or on other media.

CSS is among the core languages of the open web and is standardized across Web browsers according to W3C specifications. Previously, the development of various parts of CSS specification was done synchronously, which allowed the versioning of the latest recommendations. You might have heard about CSS1, CSS2.1, or even CSS3. There will never be a CSS3 or a CSS4; rather, everything is now CSS without a version number.

After CSS 2.1, the scope of the specification increased significantly and the progress on different CSS modules started to differ so much, that it became more effective to develop and release recommendations separately per module. Instead of versioning the CSS specification, W3C now periodically takes a snapshot of the latest stable state of the CSS specification and individual modules progress. CSS modules now have version numbers, or levels, such as CSS Color Module Level 5

4.3 GOOGLE SUITE

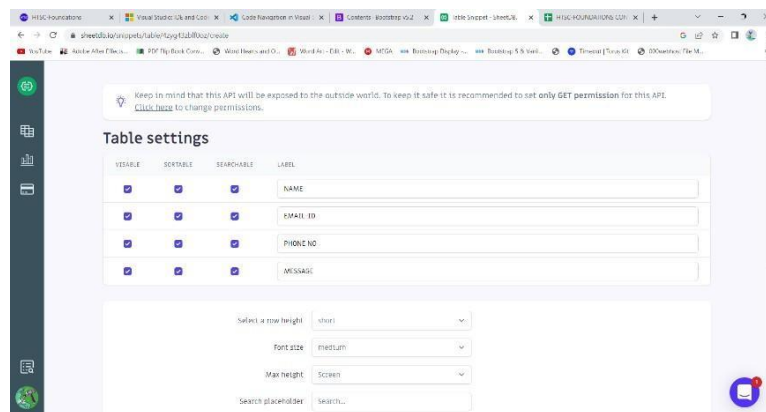

G Suite is a suite of cloud computing, productivity and collaboration tools, software and products developed by Google Cloud, first launched on August 28, 2006 as Google Apps for your

Domain: G Suite comprises Gmail, Hangouts, Calendar, and Currents for communication; Drive for storage;

While these services are free to use for consumers, G Suite adds enterprise features such as custom email addresses at a domain (@yourcompany.com), option for unlimited cloud storage (depending on plan and number of members), additional administrative tools and advanced settings, as well as 24/7 phone and email support.

Being based in Google's data centers, data and information is saved instantly and then synchronized to other data centers for backup purposes. Unlike the free, consumer-facing services, G Suite users do not see advertisements while using the services, and information and data in G Suite accounts do not get used for advertisement purposes. Furthermore, G Suite administrators can fine-tune security and privacy settings.

DATABASE(BACK END):

Each spreadsheet document you want to access must be configured in the Sheet DB panel as an API. After creating the API, you'll receive a unique endpoint URL. You can send requests to read, create, update, or delete rows. The rest of the documentation explains how each request works and what you can expect in a response.

GOOGLE SHEETS

Google Sheets is a spreadsheet program included as part of a free, web-based software office suite offered by Google within its Google Drive service. The service also includes Google Docs and Google Slides, a word processor and presentation program respectively. Google Sheets is available as a web application, mobile app for Android, iOS, Windows, BlackBerry, and as a desktop application on Google's Chrome OS. The app is compatible with Microsoft Excel file formats. The app allows users to create and edit files online while collaborating with other users in real-time. Edits are tracked by users with a revision history presenting changes. An editor's position is highlighted with an editor-specific color and cursor and a permissions system regulates what users can do. Updates have introduced features using machine learning, including "Explore", offering answers based on natural language questions in a spreadsheet.

PROJECT DESCRIPTION

5.1 MODULES:

- 5.1 HOME**
- 5.2 MARRIAGE EVENT**
- 5.3 BIRTHDAY EVENT**
- 5.4 PARTY EVENT**
- 5.5 WORKSHOP EVENT**
- 5.6 FEEDBACK**
- 5.7 ABOUT US**
- 5.8 CONTACT INFO**

5.2MODULES DESCRIPTION:

5.2.1 HOME:

In this module various sub modules is connect like marriage event ,birthday event, Engagement event, ear piercing event, about us, contact us

5.2.2 MARRIAGE EVENT:

In this module it contains various plan packages with various features and rate plan package and we can book the plan from the plan package

5.2.3 BIRTHDAY EVENT:

In this module it contains various plan packages with various features and rate of plan package and we can book the plan from the plan package

5.2.4 PARTY EVENT:

In this module it contains various plan packages with various features and rate plan package and we can book the plan from the plan package

5.2.5 WORKSHOP EVENT:

In this module it contains various plan packages with various features and rate plan package and we can book the plan from the plan package

5.2.6 FEEDBACK:

In this module user can give there feedback it will show in admin page

5.2.7 ABOUT US:

In this module about the event management will be displayed

5.2.8 CONTACT US:

In this contact info will be displayed like phone no, mail id, address.

5.3 DATA FLOW DIAGRAM:

ARCHITECTURE:

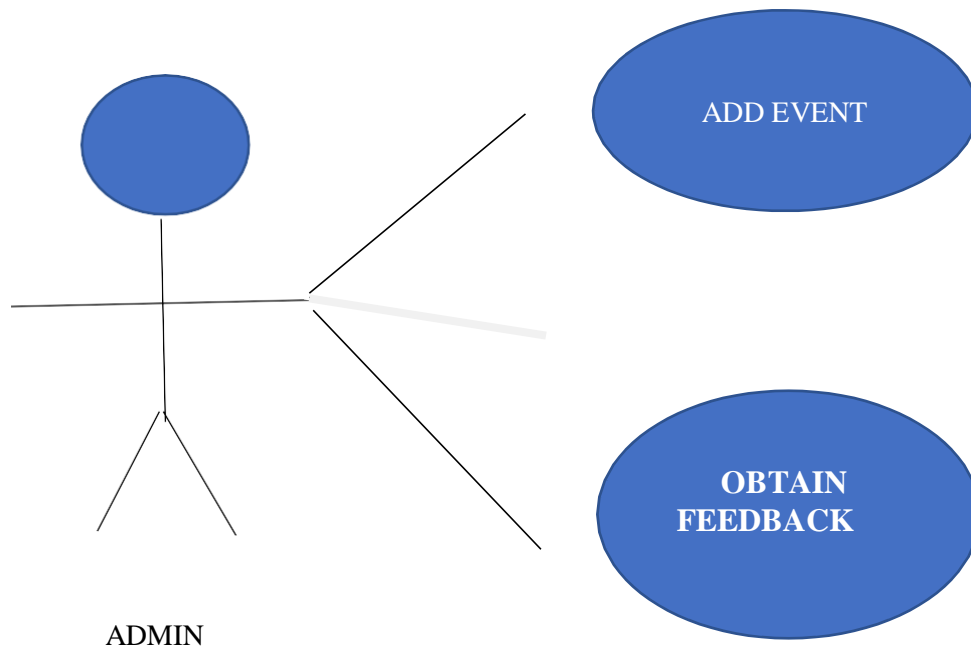

Use case diagram describes the behavior of the target system from an external point of the internal Use cases describe “the meat” of the actual requirements.

Cases: A use case describes a sequence of actions that provide something of measurable value to an actor and is drawn as a horizontal ellipse.

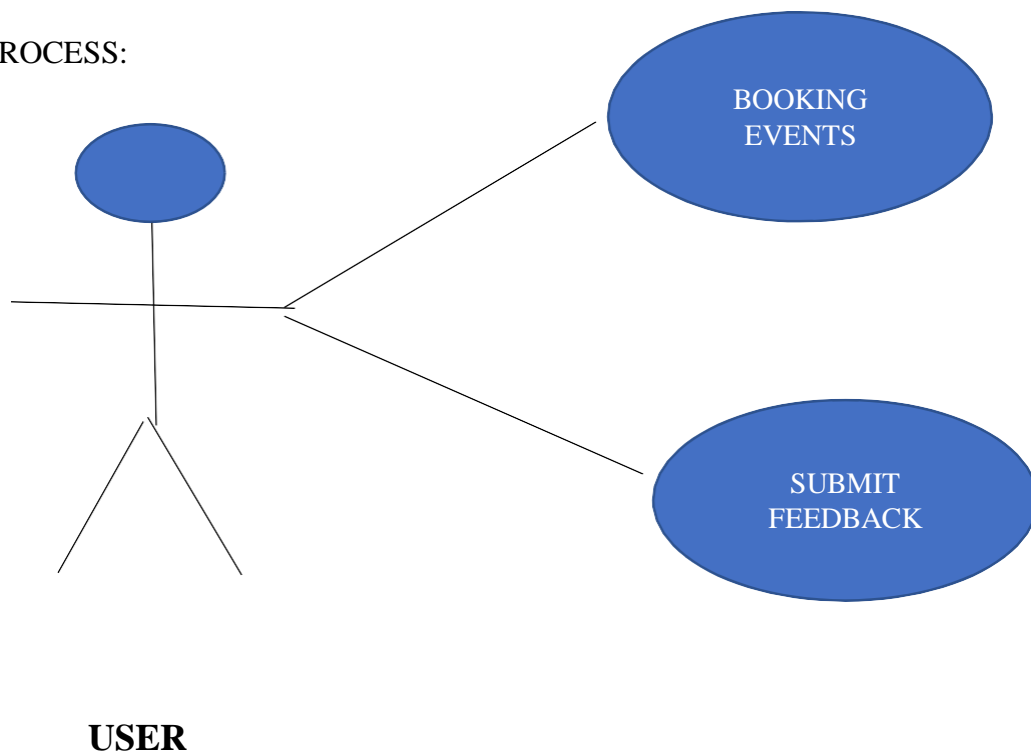

Associations: Associations between actors and use cases are indicated by solid lines. An association exists whenever an actor is involved with an interaction described use case.

5.2.1 USE CASE DIAGRAM:

CHAPTER-VI

6.1 SYSTEM TESTING:

For any software that is newly developed, primary importance has been given to testing of the system. It is the responsibility of the developer to detect all possible errors in the software before handling it to the user or Customer. Since it is an Open-source website it needs intensive testing to provide user friendly infrastructure.

6.1.1 TESTING:

Testing is the process by which a developer will generate a set of test data, which gives maximum probability of finding all types of errors that can occur in the software. Testing is an important phase in the software development cycle of any system design. Testing indicates the futility of attempting to detect all errors through testing alone. Exhaustive testing of all paths is seldom feasible, and even if it is feasible, it does not guarantee detection of missing path errors, computational errors or domain errors. These considerations re-emphasize the need for systematic analysis and design for continuous verification of work products, so that errors are removed prior to implementation.

Apart from Black box testing, which tests the behavioral aspects of the system and white box testing, which tests the functional aspects of the system, there are various testing strategies to carry out software testing at the successful level. They are explained below as follows:

6.1.2 UNIT TESTING:

Unit testing or First-Level Testing comprises the set of tests performed by an individual programmer prior to integration of the Modules or units into a larger system. The system modules login, administrator, hall-manager, customer modules are being tested.

6.2 ACCEPTANCE TESTING:

Acceptance testing, a testing technique performed to determine whether or not the software system has met the requirement specifications. The main purpose of this test is to evaluate the system's compliance with the business requirements and verify if it has met the required criteria for delivery to end users. User acceptance Testing

- Business acceptance Testing
- Alpha Testing
- Beta Testing

6.3 TEST CASES

A test case is a document, which has a set of test data, preconditions, expected results and post conditions, developed for a particular test scenario in order to verify compliance against a specific requirement.

Test Case acts as the starting point for the test execution, and after applying a set of input values; the application has a definitive outcome and leaves the system at some end point or also known as execution postcode.

CHAPTER - VII

CONCLUSION & FUTURE ENHANCEMENTS

7.1 CONCLUSION

Finally, the system is used to store customer records in Google sheet database the main aim of this project is less the customer work.

- view customer request
- contact they through online
- Customized processes & scheduling.

7.2 FUTURE ENHANCEMENTS

In this project, many future plans may be implemented to this process. However future thinking has expanded hugely in scope and substance. This system can be expanded to be more user friendly & Secured. Some of them are listed below.

- In future it can be developed as an application.
- It will be made more user friendly than now.
- There will be increased security and privacy.
